

AQUATHERM BLUE PIPE —TOPS FOR HOPS

PROJECT:

Aardwolf Brewing Company,
Process Piping

PRODUCTS:

aquatherm blue pipe®

LOCATION/DATE:

Jacksonville, FL
Spring 2013

THE CHALLENGE

The owners sought a piping system to transfer a glycol/water mixture from the chiller to the fermenting tanks and the cold-water storage tanks. Typical options weren't durable enough for the circumstances

THE SOLUTION

Aquatherm Blue Pipe delivered a more durable solution than plastic and a less expensive one than metal, along with a 10-year multimillion dollar warranty

"I believe I was able to save the consumer around 50% in material and labor compared to a copper or black iron pipe installation. Also, I believe the main savings will be long-term in the durability, corrosion resistance and maintenance."

- Bernhard D. Echt, owner of Bernie's Boiler & Cleaners Equipment Service, Inc., Jacksonville, FL

AQUATHERM ADVANTAGES

- The durable Aquatherm pipes withstand glycol/water in low temperatures over extended periods of time, perfect for a brewery
- Less expensive than copper and far more durable than CPVC in low process temperatures for long-term
- Reliable and long-lasting
Aquatherm provided peace of mind and excellent future expansion options, thanks to fusion outlets.
