

## MICHIGAN BREWERY GOES BLUE TO BE GREEN WITH AQUATHERM BLUE PIPE

### PROJECT:

Founders Brewing Co.,  
Heating Distribution

### PRODUCTS:

**aquatherm blue pipe®**

### LOCATION/DATE:

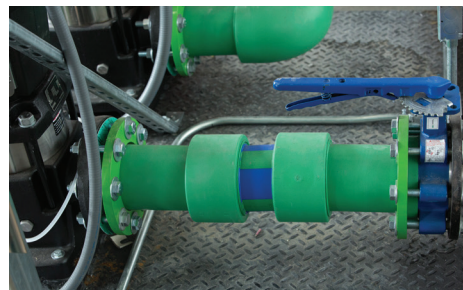

Grand Rapids, MI  
Fall 2013

### THE CHALLENGE

Ownership sought an alternative to metal for their new heat reclaim system, which takes heat from the fermentation process to heat the building

### THE SOLUTION

Aquatherm Blue Pipe® was selected for a multitude of reasons, including its energy efficiency (flow rate and inherent insulation) and its ability to handle high temperatures with minimal expansion and contraction

"We wanted to make a good business decision and do the right thing (environmentally)... with the heat reclaim process and Aquatherm piping, we were able to do both."

-Brad Strouse, Account Manager, Seaman's Mechanical, Grand Rapids, MI

### AQUATHERM ADVANTAGES

- Aquatherm has a natural R-value of 1 or more depending on SDR, which allows the system to be more efficient than metal
- The reliability of the heat fusion process used to connect Aquatherm eased concerns about leakage
- Aquatherm Blue Pipe® can be easily washed and maintained
