

WORTH THE SCRATCH

PROJECT:

Haverkamp Chicken Farm
Hydronic Heating

PRODUCTS:

aquatherm blue pipe®

LOCATION/DATE:

Listowel, ON, Canada
Fall 2016

THE CHALLENGE

A poultry farmer and former fire victim needed a hydronic heating system that would reduce heating costs and eliminate combustion flame inside his barn.

THE SOLUTION

Piped entirely with Aquatherm PP-R piping, the new heating system is safer, cleaner, and more efficient than any the poultry farmer has ever used or seen.

"I like to make things better when I can. If you ask me if I'd do it again, I'd tell you 'I would!' It's nice and clean, and I don't have wires hanging all over the place."

—Hugh Haverkamp, Poultry Farmer,
Listowel, ON, Canada

AQUATHERM ADVANTAGES

- Unlike metal pipe, Aquatherm PP-R piping systems require no open-flame welding or solder
- A two-person crew installed the entire system in less than a week, using safe and efficient heat fusion to create nearly 200 connections
- With 2,000 ft of pipe to suspend, the project would have been extremely difficult to install had metal pipe been used rather than lightweight Aquatherm PP-R piping systems
