

SWEET INSTALLATION

Aquatherm's heat-fused PP-R piping helps speed up HVAC retrofit at U.S. candy company's headquarters

PROJECT:

U.S. Candy Manufacturer's
Office Space
Geothermal

PRODUCTS:

aquatherm blue pipe®

LOCATION/DATE:

South Central U.S.
August 2012

THE CHALLENGE

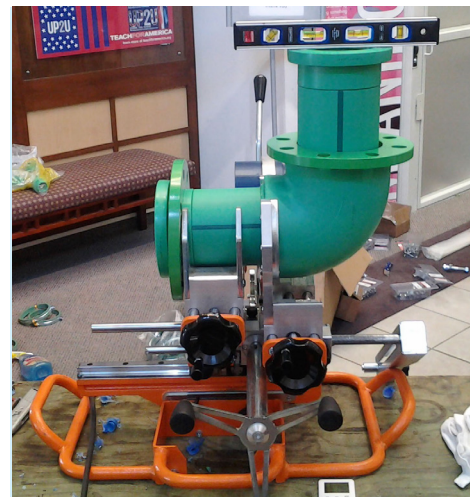

After four months of repairing leaks, a candy manufacturer finally approved a retrofit on a carbon-steel geothermal loop when a wall shared by an expensive data center was affected

THE SOLUTION

Even with unique time and space constraints, the mechanical contractor chose Aquatherm PP-R piping systems, and the project still was completed under budget and ahead of schedule

"We had put together a time and event schedule that had the project taking almost three months, but [the mechanical contractor] was able to cut a month off of that because of how fast they were able to fuse the product and put it together."

—Facility Manager, Candy Manufacturer,
South Central U.S.

AQUATHERM ADVANTAGES

- Aquatherm's unique heat-fusion welding technique allowed the mechanical contractor to fuse the piping system quickly, finishing the project a month ahead of schedule
- Because of Aquatherm's light weight and simple heat-fusion process, the mechanical contractor's projected labor costs came in under budget
- Aquatherm provided a leak-free piping system

we've got a pipe for that
