

A PEACH OF A PROJECT

The 22-story Windsor Over Peachtree condominium building features commanding views of downtown Atlanta and the surrounding area (left). Above: Aquatherm pipe in place at Windsor Over Peachtree. Its virtually leak-free performance impressed the installing contractor.

PROJECT:

Windsor Over Peachtree
condominium
HVAC system

PRODUCTS:

aquatherm blue pipe®

LOCATION/DATE:

Atlanta, GA
December 2017 - July 2018

THE CHALLENGE

Replacing the deteriorating and leaking HVAC piping in an occupied, 22-story condominium building with tight mechanical blockouts between floors

THE SOLUTION

Lightweight and virtually leak-free Aquatherm Blue Pipe® was installed with no flame or welding, and the fast installation speed made possible by offsite fabrication caused minimal disruption for the residents

"Aquatherm is a plastic, but don't even consider equating it to something like PVC or CPVC. It doesn't even compare to those pipes. It's in a class of its own."

— Joe Escher, Vice President, E. Escher Inc. Mechanical Contractors, Roswell, GA

AQUATHERM ADVANTAGES

- The virtually leak-free performance of heat-fused Aquatherm pipe impressed the contractor — only five leaks were detected out of more than 4,000 fusion welds
- The ability to fabricate risers offsite presented considerable installation time savings over steel pipe, and dramatically reduced system downtime in an occupied building
- As this was an occupied building, the ability to install new pipe without welding or open flame was of paramount importance to the building owner

we've got a pipe for that
