

THE FOLLOW-UP FILES: AQUATHERM DELIVERS LONG-TERM PERFORMANCE AT FLORIDA DATA CENTER

Aquatherm pipe in place during the 2014 renovation of a 1983 building into a modern data center.

PROJECT:

TierPoint Data Center
Mission-Critical HVAC

PRODUCTS:

aquatherm blue pipe®

LOCATION/DATE:

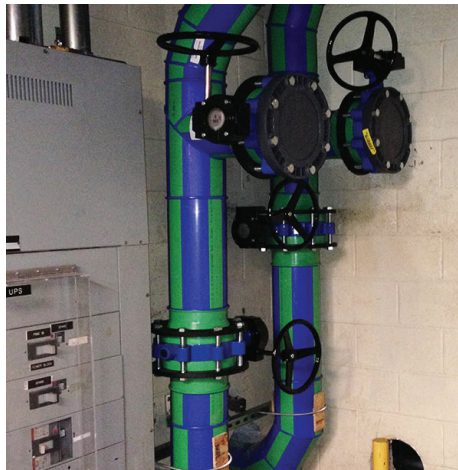

Jacksonville, FL,
Original installation Winter 2013-2014
Follow-Up January 2020

THE CHALLENGE

Data centers need cooling systems that will provide trouble-free performance, 24/7, for decades

THE SOLUTION

Aquatherm's heat-fusion connections are virtually leak-free, and the pipe will never scale or corrode, making it the ideal pipe for mission-critical applications

"We've been very happy with the performance [of the Aquatherm pipe]. We have another 22,000 sq ft of space that we'll be expanding into in the next 18 months or so, and we plan on using Aquatherm for that project."

- Eric Mason, Manager of Data Center Operations, TierPoint Jacksonville

AQUATHERM ADVANTAGES

- Aquatherm's heat fusion joining process creates a connection with no leak paths
- Aquatherm pipe will never scale or corrode, so its performance in mission-critical applications will not change over time
- Aquatherm pipe has an anticipated life span of 50-plus years—much longer than steel pipe. It can be expected to provide trouble-free operation for decades
