

OLD DOMINION'S NEW CENTRAL UTILITY PLANT REIGNS AS A FAST-TRACK MASTERPIECE

Aquatherm's Scan-to-Fab and Fabrication Services teamed up to provide a custom-fit solution in Old Dominion University's central utility plant.

PROJECT:

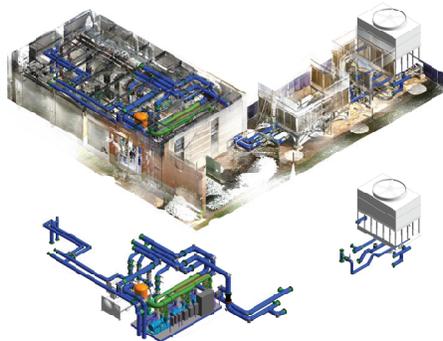

Old Dominion University
Central Utility Plant, HVAC

PRODUCTS:

aquatherm blue pipe®

LOCATION/DATE:

Norfolk, VA
Winter 2019

THE CHALLENGE

A tight construction schedule because of the number and type of campus buildings affected left no margin for error on this piping project's completion date

THE SOLUTION

Thanks to Aquatherm's Scan-to-Fab, Fabrication Service, and fast installation, a project that would have taken four months with steel pipe was completed in five weeks

"Aquatherm came into the existing building and scanned it completely. We took the cloud points from the scan and sent the model drawings to Aquatherm's fabrication group in Lindon, Utah, and they used the information to custom fabricate the pipe for this facility."

— Richard Goad, Project Executive, JRC Mechanical, Chesapeake, VA

AQUATHERM ADVANTAGES

- Using Aquatherm's Scan-to-Fab service and Fabrication Service on this project enabled the installation crews to maximize their time and meet a very tight schedule
- Thanks to virtually leak-free heat-fusion connections, the installed system easily passed its pressure test and qualified for Aquatherm's multimillion-dollar warranty
- In day-to-day use, Aquatherm pipe significantly reduces or eliminates the problems that corrosion and scaling can cause over the life of a system
