

THE NEW SOUTH RISES AGAIN

The light weight of Aquatherm pipe makes it easy to handle and maneuver, and eases the weight load on the building's roof.

PROJECT:

New South Federal Savings Building
Hydronic Cooling System Piping

PRODUCTS:

aquatherm blue pipe®

LOCATION/DATE:

Birmingham, AL
February 2019 – May 2019

THE CHALLENGE

Retrofitting the cooling system in a historic, 95-year-old building that had not been designed to accommodate modern hydronic piping

THE SOLUTION

Aquatherm pipe is lightweight, easy to work with, and versatile, and a first-time installing contractor easily field fabricated the piping system to meet the needs of the project

"Everyone on the installation team was impressed with how well-engineered the Aquatherm pipe was and how easy it was to work with."

— Brandon Henley, Operations Manager,
Service Tech, Birmingham, AL

AQUATHERM ADVANTAGES

- The ability to custom-fabricate Aquatherm pipe assemblies on site was a key to successfully retrofitting a 1920s-era building
- Aquatherm's ease of use, training, and support resulted in a successful project for a first-time Aquatherm installer
- Unlike metal pipe, Aquatherm requires no welding, open flame, or sparks, which is particularly important in an occupied building
