

THE DATA ARE IN: 'HYPERSCALE' DATA CENTER SELECTS RELIABLE AQUATHERM PIPE

Aquatherm Blue Pipe plays a key role in ensuring the data in the new Novva "hyperscale" data center stays cool and secure.

PROJECT:

NOVVA Data Center and Headquarters
HVAC, Plumbing

PRODUCTS:

aquatherm blue pipe®
Scan-to-Fab

LOCATION/DATE:

Salt Lake City, UT
Ongoing. Phase one of four began Spring 2021

THE CHALLENGE

This provider of data center space needed cooling pipe with ultra-high reliability to ensure the safety and security of its clients' data. The "hyperscale" flagship data center is planned to ultimately include more than 1.5 million square feet of data center space

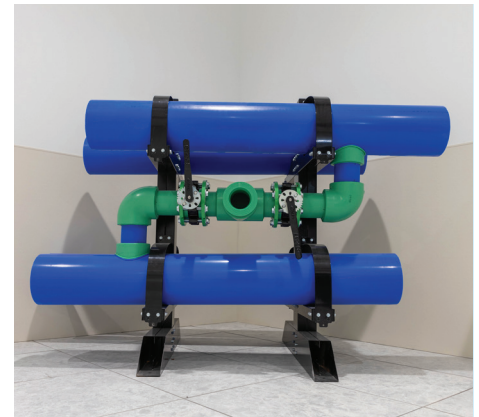

THE SOLUTION

For the peace-of-mind that makes this data center truly start-of-the-art, the cooling system for the computer servers boasts Aquatherm PP-RCT piping that will provide reliable, virtually leak-free service for decades to come

"Aquatherm's installed costs are lower, and their warranty is something that no steel vendor could match."

—Scott Boyce, Mission Critical, Novva

AQUATHERM ADVANTAGES

- Aquatherm's building information modeling (BIM) capabilities and Scan-to-Fab service helped ensure that the installation went smoothly by preventing underfloor conflicts and collisions
- The ease of installation of Aquatherm pipe helped the installing contractor stay ahead of the project's tight schedule
- The project is being built out in four phases, and future expansions of the cooling system piping will be quick and easy with Aquatherm pipe
