

Aquatherm Sustainability Impact

We began with the intent to find a better way – a better material for piping.

That vision has expanded. Our focus is to contribute to a sustainable way of life that includes places, processes, and the lives of people. As members of the worldwide construction community, we believe it is our responsibility.

Embracing Green Building

Aquatherm has commissioned a third-party organization to conduct an environmental product declaration (EPD) and life cycle assessment (LCA) to assess the cradle-to-gate impact of its polypropylene piping systems. EPDs and LCAs are used across multiple industries by manufacturers to provide transparent environmental data to engineers, architects and building owners.

Aquatherm's polypropylene piping systems qualify for product-specific rating

All of Aquatherm's piping product lines offered in North America have attained Type III status through independent verification by NSF International. They can now be utilized as part of the 20 permanent products engineers must have throughout their LEED-certified building.

These piping systems also carry double the weight of a generic industry EPD in terms of LEED value and four times the weight of a self-certified declaration by a manufacturer.

Managing our processes

From production to installation to recycling, our systems are designed to have as little impact on the environment as possible.

Aquatherm adheres to the strictest production standards for sustainability, uses environmentally friendly manufacturing processes, and is constantly working on further improvements. Even the production of polypropylene is clean, as it is a by-product of crude oil processing. 3% of crude oil is used for plastic production, which has a much smaller impact than the mining and smelting used to produce metals.

People who care about people

Today, aquatherm and its global network employ 600+ worldwide. We are invested in the big picture.

It is the culture of our company to celebrate the talent and intent of our people. We encourage balance and growth for all who are part of Aquatherm. We recognize the contributions our team members make not only on the job but also in their homes and communities. We are continually working towards minimizing our long-term environmental, social, and governance risks and making a better contribution to the lives of our world community.
