

AQUATHERM IN DATA CENTERS

Data has become a mega industry in its own right, and the challenge presented by the massive explosion of data is storage. Data must be kept safe, it must be kept secure, and—perhaps most importantly—it must be kept cool.

Aquatherm Blue is ideal for data centers and other mission-critical applications that use liquid cooling systems. Durable Aquatherm pipe can easily handle the temperatures and pressures required to cool even the largest data centers, and is used in the cooling systems of some of the world's largest and most powerful supercomputers.

- Aquatherm is joined using heat fusion, which creates a permanent, leak-free connection.
- Aquatherm pipe is lightweight and durable, with an expected life span of 50+ years.
- Aquatherm is hydrophobic and will never scale or corrode.
- No glues, solder, solvents, or VOCs are ever used to join Aquatherm pipe.
- Aquatherm pipe can be installed in a working data center environment with almost zero downtime.
- Lightweight, durable Aquatherm piping systems can be prefabricated on or off-site, helping an installation or piping replacement project progress quickly.

Fast Facts

Aquatherm Blue is available in sizes from 2-in. to 24-in.

Can handle fluids up to 200°F at pressures up to 100 psi.

Aquatherm Blue has an R-value of 1.
